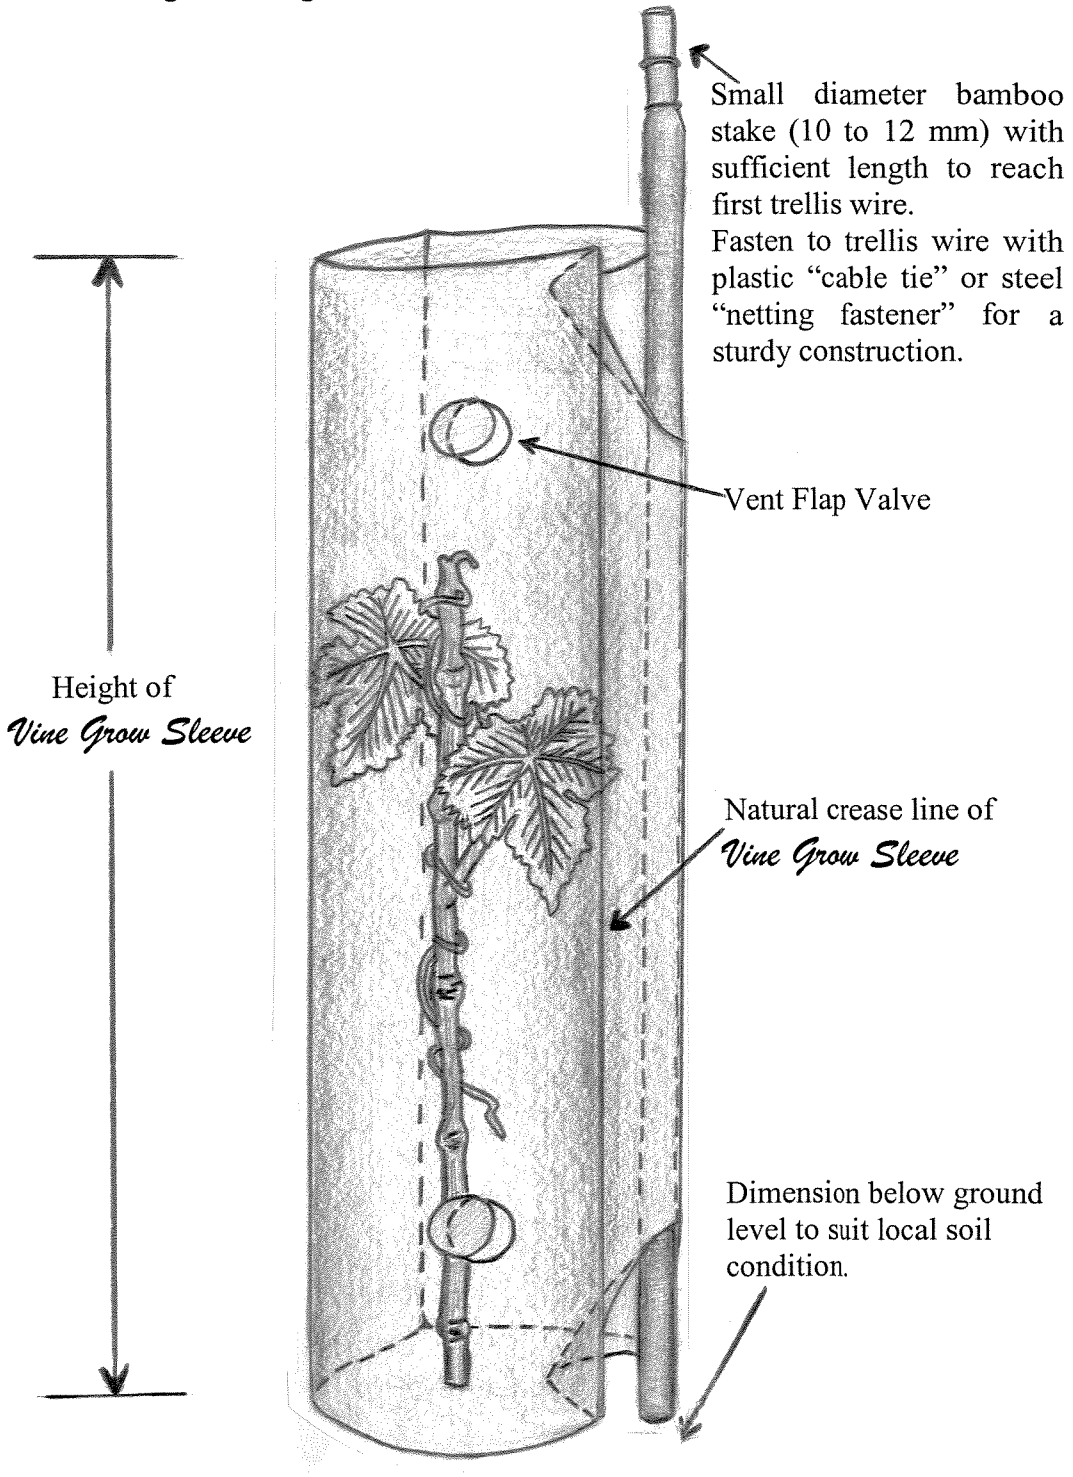
Fastening suggestions for *Vine Grow Sleeve*

Various systems have been used over the years. Growers have their own preferences, which have come with experience in particular regions.

Wind resistance is a problem with any type of vine guard including the traditional milk carton.

In very windy areas and for long *Vine Grow Sleeves* the use of a bamboo stake has shown to be the most reliable way of holding the guard in place. The sketch below shows the installation details of such system.


For even more secure fastening, the *Vine Grow Sleeves* may be stapled to the bamboo stake or grow string with corrosion resistant "netting fasteners".
